The financial losses due to business email compromise (BEC) rise from the previous period

76k

Cybercrime reports from July 2021 to June 2022*

Upgrading your cyber security is a must.

The Importance of Strong **Cyber Security**

The Australian Government continues to update the Privacy Act to ask Australian Businesses to take reasonable steps to protect Personally Identifiable Information (PII) that they hold of individuals. The Australian Cyber Security Centre has undertaken the process to create a framework called the 'Essential 8' to help Australian business mitigate risk of cyber threats.

Implementing the Essential 8 proactively can be more cost-effective in terms of time, money and effort than having to respond to a cyber security incident. In certain cases, some businesses are legislated to comply with the Privacy Act and take 'Reasonable Steps' to protect Personally Identifiable Information.

More Than Compliance

Your business needs a greater level of security because...

Cyber security reports rose by 13% and the severity of cyber incidents is increasing. Even with sufficient protection today, your business will have a higher risk tomorrow.

Your business is a potential target.

Cyber security incidents cut across industries/sectors, location, and business size. This makes every business a potential target – including yours.

A cyber-attack can cause losses to your business.

One attack can cause disruption, reputational damage, and financial loss.

\$50+

In potential penalites for serious or repeated privacy breaches

"Wait... We already have 'security'. Aren't we already compliant?"

Although you may have a Managed IT solution in place, it's crucial you identify whether your current solution provides adequate security. Given the specific technical and governance nature of the Essential 8 & Privacy Act requirements, most organisations are unlikely to have reached a Maturity Level 1 (the most basic level of security) without specific implementation.

While no set of mitigation strategies are guaranteed to protect against all cyber threats, organisations are recommended to implement 8 essential mitigation strategies from the ACSC's Strategies to Mitigate Cyber Security Incidents as a baseline.

Our Process to Reinforce Your Security

ADITS' cyber security approach follows this basic process:

1

Plan

Our team will perform an in-depth assessment of any existing Essential 8 controls by collecting evidence of prior assessments and engaging with your stakeholders.

2

Identify Gaps

We will use the Essential 8 Assessment Process Guide and the OIAC Notifiable Data Breach Scheme to identify any gaps and measure your cyber security posture.

3

Make Improvements

We will align your posture to the ACSC Essential 8 Maturity Level 1 Framework, using business grade software, 24/7 monitoring, end user training, and the introduction of policies and processes.

Your Ally In The Fight Against Cyber Attacks

Enable CyberShield for your business' ultimate protection.

Build trust and confidence among customers and partners

Ensure business continuity and minimise downtime

Minimise possible losses, liabilities, and damage

We've Got You Covered

Managed Detection & Response 24/7 Security Operations Centre

- Fully managed service delivered by experts who detect and respond to cyberattacks targeting your computers, servers, networks, cloud workloads, email accounts, and more.
- ✓ Login event detection we monitor for login events that are unusual or suspicious.

Email Advanced Threat Policies

- ✓ Anti Phishing, Safe Links, Safe Attachments, Anti-Spam
- Advanced Threat Protection Policies are enforced to keep your organisation & staff as safe as possible.

Multi-factor Authentication Enforcement

Multi-factor authentication (MFA) is a security measure that requires two or more proofs of identity to grant you access.

Dark Web Monitoring

- Monitoring of dark web for exposed information
- If your password is found on the dark web, we'll contact the affected user and reset the required password within 48 hours from when the breach is published.

Virtual Security Awareness Training

✓ Virtual cyber security end-user training is included.

Patching Compliance

We deploy security updates for your approved applications and devices within 48 hours.

Privacy Act 'Reasonable Steps'

Governance Risk & Compliance.

Security Standard

Alignment to the ACSC Essential 8 Maturity Level 1.

Unlimited Support

Breach Remediation & Act on your Behalf!

If we detect a breach on your Microsoft 365 account, it may be locked down for a minor event or disabled for a major event. We will perform a detailed Breach Response Report and inform you if it needs to be reported to the Privacy Commisioner.

The ADITS Difference

Beyond the technology, we value our client partnerships and strive to empower business leaders to reach their business goals while keeping their business secure.

We Care & Understand Your Cause

We understand all the work you put into your business, that's why we put in all the effort required to align our work with your company objectives.

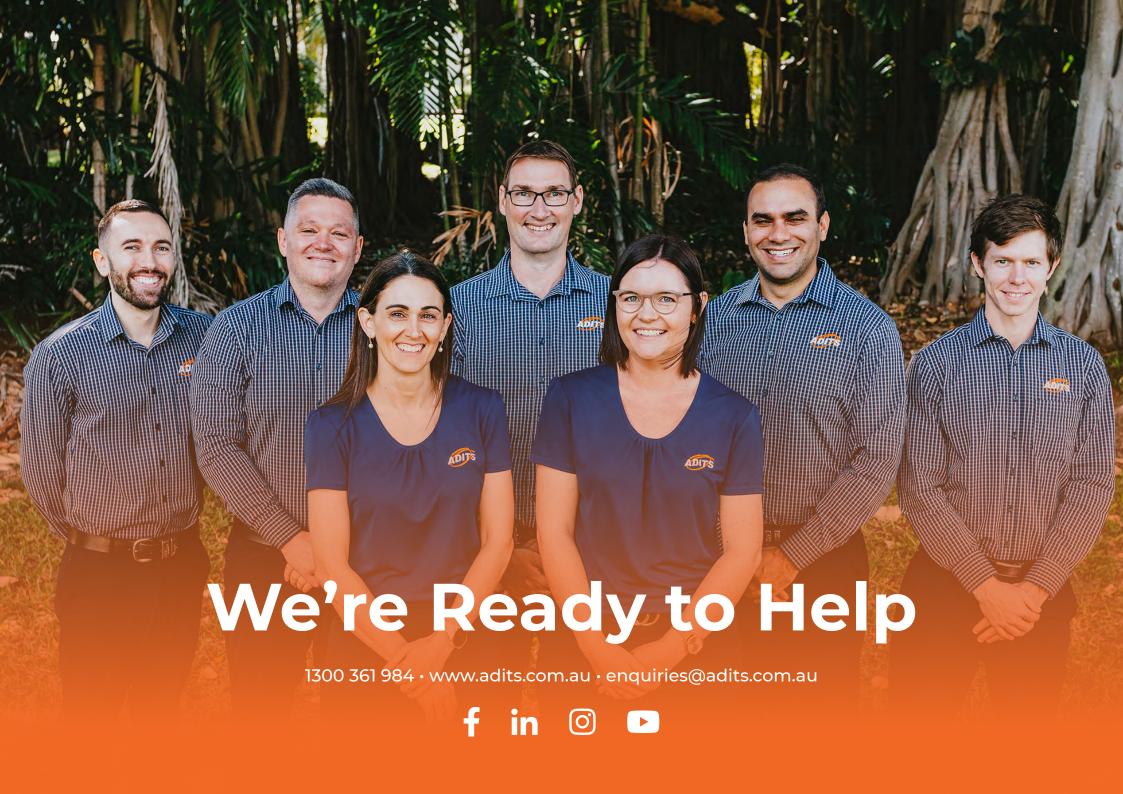

We Challenge the Way it's Done & Continually Evolve

We cannot do our best work if we stop learning. Technology changes fast, so we update ourselves accordingly – to help you stay ahead in the game.

We're Transparent & Cut the Tech Talk

We want to be sure you understand what we're trying to convey. We'll try to answer all your questions clearly and address every challenge directly.
